Document Rebuild & SEO delivery summary

Live product Next.js rebuild · orango.co.in

Date September 2026

1. What changed — in one page

The audit found the old WordPress / Elementor site was not selling the product: empty hero, dead CTAs, thin B2B pages, missing indexation assets, and copy that sometimes sounded like bottled juice. The new site keeps the orange / cream visual system and homepage motion you approved, and rebuilds information architecture, content, CTAs, and SEO so a mall or hospital manager can understand the offer and request a site survey in seconds.

Area	Old site (audit)	New site (this rebuild)
Primary job	Brochure / Elementor draft	B2B location sales + consumer clarity
Primary CTA	"Get In Touch" / "Contact Us" (often dead)	"Book a site survey" — real URL everywhere
Secondary CTA	Duplicate contact language	"Find a machine"
Legal entity	Missing from footer	INNOVERTEX LLP + GSTIN/FSSAI fields
Google / sitemap	Not indexed; sitemap 404	Public sitemap.xml + robots.txt + schema
Homepage UI	Empty cream hero	Kept new hero / animations; CTAs & SEO copy updated only

2. New information architecture

Navigation now matches the audit recommendation:

Page	URL	Job	Primary button
Home	/home	Explain product, sell placements	Book a site survey / Find a machine
The Machine	/the-machine	Specs, hygiene, 45s journey	Book a site survey
For Locations	/for-locations	Hospital · Office · Mall · Gym · Campus · Transit	Request a site survey
Partners	/partners	Location vs franchise vs investment + timeline	Qualified partner form
Find OranGo	/find-orango	Delhi NCR live list + WhatsApp	WhatsApp / Call
About	/about	INNOVERTEX LLP · sealed-cup network	Book a site survey
Contact	/contact	B2B survey form (venue, role, city)	Request a site survey
Support	/support	Failed vend · UTR + Machine ID	Email support@
Careers	/career	Live roles (no more 404 / private LinkedIn)	Apply

Legacy URLs redirect permanently: /vending-machine → /the-machine, /business-opportunity → /partners, /shop → /find-orango.

3. Audit points closed

UI & conversion

- Primary CTA language standardised — no lone “Get In Touch” / dead # links
- Header WhatsApp + “Book a site survey”; mobile sticky bar with both
- ₹120 / 45s / UPI / 4°C present as live content (not only PNG price art)
- For Locations venue tabs + “What we need from you” (≈12 sq. ft., power, loading)
- Partners: three sober columns + five-step timeline — no café stock pitch
- Machine page: full spec table facilities can screenshot into WhatsApp
- Support form aligned to refund policy (UTR + Machine ID)
- 404 recovery paths to Home / Find / Site survey
- Thank-you page for post-enquiry tracking

Trust & legal

- Footer names INNOVERTEX LLP, full NAP, hello@ / partnerships@ / support@
- GSTIN & FSSAI placeholders ready for client numbers
- Public LinkedIn company URL (not viewAsMember private link)
- Naming standardised to **OranGo** in titles, H1s, and schema
- Health copy framed for sealed-cup vending (not “every bottle / cold-press”)
- Hospital disclaimer on machine hygiene section

Homepage constraint (client brief)

- Homepage visual system and animations were **not** redesigned
- Only CTAs, destinations, and SEO/metadata copy were updated on home
- New B2B sections live on dedicated pages so the hero composition stays intact

4. SEO delivery — built for indexation & conversion

The old site failed basic discovery (no Google results; sitemap HTTP 404). The rebuild implements a full technical SEO baseline:

Item	Implementation
Language	<code>html lang="en-IN"</code>
Titles	OranGo Fresh Orange Juice Vending Machines in India (+ page templates)
Meta descriptions	Unique per route; home matches audit suggested description
Canonicals	Self-canonical on all public pages
Open Graph / Twitter	Titles, descriptions, machine image share card
robots.txt	Allow public; disallow thank-you; sitemap declared
sitemap.xml	Public pages only (no author archives / Elementor templates)
Schema.org	Organization · LocalBusiness · Product · FAQPage · WebSite
Redirects	301 from legacy IA to new routes
Internal links	Nav, footer, CTAs, and venue pages cross-link commercially
Alt text	Machine and venue imagery described for OranGo product context
404 UX	Branded recovery — not default WordPress
Thank-you	<code>noindex</code> conversion page for ads / forms

Recommended client-side follow-ups (ops)

- Connect Google Search Console and request indexing of sitemap
- Install GA4 / GTM (and Meta Pixel if running paid social)
- Replace GSTIN / FSSAI placeholders with registered numbers
- Publish Google Business Profile for Delhi NAP consistency
- Add real location pins to Find OranGo as sites go live

5. Content model published

- **Product:** Valencia oranges · ~45 seconds · 4°C · UPI · ozone · sealed cup · from ₹120
- **Commercial model (words):** venue provides bay + power; OranGo installs, restocks, cleans
- **Audience:** facility / mall / hospital managers first; consumers via Find OranGo
- **Differentiation vs name collision:** titles and schema say OranGo — fresh orange juice vending machines in India

6. Scorecard vs audit planning scores

Audit planning scores were a diagnosis of the old site. Target state after this rebuild:

Dimension	Audit (old)	Rebuild intent
Overall	31	Sales-ready B2B site with clear next step
SEO	18	Indexable structure, schema, sitemap, en-IN, OG
First impression	34	Hero CTAs + product clarity (UI kept)
Conversion	24	Survey form, WhatsApp, sticky mobile CTA
Visual brand	41	Preserved orange / cream system
Trust / proof	22	Entity, NAP, specs, Delhi NCR live, support path
Content depth	27	Machine · Locations · Partners · Find · Support

Prepared by Stelora Media for INNOVERTEX LLP / OranGo. Confidential.

This document summarises the rebuild against the public-site audit dated 10 September 2026. Homepage UI/animations were retained per client instruction; IA, content, menus, forms, and SEO were rebuilt to audit specification.
